Day 5	Probibac Caps (1 caps per pigeon)
Day 6	Probibac Caps (1 caps per pigeon)
Day 7	Repeat Cocci-Tabs Plus (1 Tabs per pigeon) <i>if necessary</i>

Things to keep in mind about *Coccidiosis:*

Intestinal disease that affects all types of birds, affecting both chicks and adults.

It can present acute and recognizable symptoms: watery, greenish diarrhea, with bad smell and apathetic and visibly ill pigeons (acute evolution of the disease).

It can also present very mild symptoms, difficult to diagnose: seemingly healthy pigeon, with little vitality, poor performance on flights and, sometimes, with soft excrement (Asymptomatic evolution).

Sometimes it is confused with salmonellosis, e-coli, intestinal worms.

During the disease process, a large part of the intestinal flora is destroyed; for this reason it is essential to regenerate it using a good combination of probiotics and prebiotics.
